

## **Build Prompt: Mono Design E-Business Website**

### **1. Project Overview**

Build a modern, professional, responsive **e-business marketplace website called "Mono Design"**.

Mono Design is an online platform that connects **clients who need design services** with **professional designers and design service providers**.

The platform should operate using a **subscription-based business model** with three client subscription plans. Different plans should unlock different platform features and capabilities.

The website should allow clients to:

- Discover designers
- View designer profiles
- View design portfolios
- Check designer ratings and reviews
- Browse available design services
- Add services to a shopping cart
- Contact designers
- Request quotations
- Purchase/subscription design services
- Manage projects
- Review completed services

Designers should be able to:

- Create a professional design profile
- Upload and manage portfolios
- List their design services
- Set service pricing
- Receive client enquiries
- Respond to clients
- Manage orders/projects

- Receive ratings and reviews
- Track their business performance

The platform should support three major client segments:

1. **Individual Clients**
2. **Business Clients**
3. **Marketing Agencies**

## **2. Brand and Design Direction**

Use the brand name:

### **MONO DESIGN**

Design style:

- Modern
- Minimalist
- Professional
- Premium
- Creative
- Clean
- Technology-oriented
- Strong visual hierarchy
- Generous whitespace
- High-quality typography
- Mobile-first responsive design

Use a **monochrome-inspired visual identity** based primarily on:

- Black
- White
- Dark grey
- Light grey

Use one subtle accent colour only where necessary for calls-to-action, notifications, links, and important interactive elements.

The interface should look similar to a modern SaaS platform combined with a premium creative marketplace.

Avoid an overly colourful or cluttered design.

### **3. Main User Types**

Create the following user roles.

#### **A. Individual Client**

Individuals who need design services for personal projects, social media, events, personal branding, websites, presentations, etc.

Example services:

- Logo design
- Poster design
- Social media graphics
- Resume/CV design
- Personal branding
- Presentation design
- Invitation design

#### **B. Business Client**

Businesses that require professional design services.

Example requirements:

- Corporate branding
- Logo design
- Marketing collateral
- Website UI design
- Packaging
- Social media content
- Advertisement creatives
- Business presentations
- Product catalogues

### **C. Marketing Agency**

Agencies that need designers for recurring or large-volume projects.

Agencies may require:

- Multiple designers
- Multiple projects
- Recurring design work
- Bulk design requests
- Agency collaboration
- Priority support
- Project management
- Multiple team members

### **D. Designer**

Design professionals who offer services through Mono Design.

Designer profile should include:

- Profile photo
- Designer name
- Professional title
- Location
- Short biography
- Skills
- Years of experience
- Design categories
- Software/tools
- Languages
- Hourly/project rate
- Availability
- Ratings
- Reviews

- Completed projects
- Portfolio
- Services offered

#### **4. Subscription Plans**

Create three client subscription plans.

Use the following initial structure but make the plans configurable through the administrator dashboard.

##### **PLAN 1 — MONO BASIC**

Target:

##### **Individual Clients**

Suggested features:

- Browse designers
- Search designers
- View designer profiles
- View portfolios
- View ratings and reviews
- Contact designers
- Save favourite designers
- Add services to cart
- Place service requests
- Basic project management
- Basic client dashboard
- Email notifications

Display this as the entry-level plan.

## **PLAN 2 — MONO BUSINESS**

Target:

### **Businesses**

Include everything in Basic plus:

- Multiple active projects
- Advanced designer search
- Priority enquiries
- Request quotations
- Project tracking
- Service order management
- Download project files
- Saved designer collections
- Business profile
- Multiple contacts/team members
- Design briefs
- Project history
- Priority support
- Business analytics

## **PLAN 3 — MONO AGENCY**

Target:

### **Marketing Agencies**

Include everything in Business plus:

- Multiple agency users
- Multiple client accounts
- Unlimited/expanded projects
- Advanced project management
- Designer collaboration
- Team assignments

- Bulk service requests
- Recurring design services
- Agency dashboard
- Advanced analytics
- Priority designer matching
- Dedicated support
- Agency project history
- Custom service packages

Clearly display the three plans on the pricing page.

Include:

- Monthly pricing
- Annual pricing
- Monthly/Annual toggle
- Feature comparison
- "Choose Plan" button
- "Start Free Trial" button where applicable

Make subscription features configurable from the admin dashboard.

## **5. Public Website Pages**

Create the following pages.

### **Home Page**

Hero section:

**"Find the Right Designer. Bring Your Ideas to Life."**

Supporting text:

"Mono Design connects individuals, businesses and agencies with talented designers for creative projects of every size."

Primary CTA:

**Find a Designer**

Secondary CTA:

## **Become a Designer**

Include:

- Hero visual
- Search bar
- Popular design categories
- Featured designers
- Featured services
- How Mono Design Works
- Subscription plans
- Client testimonials
- Designer testimonials
- Statistics
- FAQ
- Final CTA

## **6. Designer Marketplace**

Create a marketplace page where users can discover designers.

Include:

### **Search**

Search by:

- Designer name
- Skill
- Design service
- Keyword

### **Filters**

Allow filtering by:

- Design category
- Price range
- Rating

- Experience
- Location
- Availability
- Service type
- Software/tool
- Delivery time

### **Sorting**

Allow sorting by:

- Recommended
- Highest rated
- Most reviewed
- Newest
- Price: Low to High
- Price: High to Low

Display designers using attractive profile cards.

Each designer card should show:

- Profile image
- Name
- Professional title
- Skills
- Rating
- Number of reviews
- Starting price
- Completed projects
- Short description
- View Profile button
- Contact button
- Favourite button

## **7. Designer Profile Page**

Create a detailed designer profile.

Sections:

### **Profile Header**

- Profile image
- Designer name
- Professional title
- Location
- Rating
- Reviews
- Projects completed
- Years of experience
- Availability

Buttons:

**Contact Designer**

**Request Quote**

**View Services**

**Add to Favourites**

**About Designer**

Display biography and professional information.

### **Skills**

Example:

- Graphic Design
- UI/UX Design
- Branding
- Illustration
- Social Media Design
- Motion Graphics

## **Portfolio**

Create an attractive grid/gallery.

Portfolio items should include:

- Project image
- Project title
- Category
- Description
- Tools used
- Client/project type

Clicking a portfolio item should open a detailed project page/modal.

## **8. Ratings and Reviews**

Every designer should have a rating system.

Use:

★★★★★

Allow clients to rate designers after completing an order/project.

Rating categories can include:

- Quality
- Communication
- Timeliness
- Professionalism
- Value

Display:

- Overall rating
- Number of reviews
- Rating distribution
- Written reviews

Example:

**4.8 / 5**

"Excellent designer. Very professional and delivered the project before the deadline."

Include safeguards so that only clients with completed projects/orders can submit reviews.

## **9. Design Services Marketplace**

Designers can create individual services.

Example:

### **Logo Design**

Starting from:

**\$150**

Delivery:

**5 days**

Includes:

- 3 concepts
- 2 revisions
- Source files
- PNG/JPG
- Vector files

Buttons:

**Add to Cart**

**Contact Designer**

**Request Quote**

Other service categories:

- Logo Design
- Branding
- Website Design
- UI/UX Design
- Social Media Design
- Packaging Design

- Poster Design
- Brochure Design
- Presentation Design
- Video/Animation
- Illustration
- Digital Advertising Design

## **10. Shopping Cart**

Implement a functional shopping cart.

Clients should be able to:

- Add services
- Remove services
- Change quantity
- Review service details
- View designer
- Add requirements/notes
- View estimated delivery date
- View subtotal
- Apply promotional code
- View total
- Proceed to checkout

The cart should support services from multiple designers if technically appropriate.

## **11. Contact Designer**

Create a messaging/enquiry system.

Clients can send:

- Project title
- Project description
- Budget
- Required deadline

- Attachments
- Message

Designers can:

- Receive enquiries
- Reply
- Ask questions
- Send quotations
- Accept/reject requests

Create a clean messaging interface similar to modern marketplace platforms.

## **12. Request a Quote**

Clients should be able to request a custom quotation.

Form:

- Project name
- Design category
- Project description
- Target audience
- Required deliverables
- Budget range
- Deadline
- Reference files
- Additional requirements

Designer receives the request and can respond with:

- Price
- Deliverables
- Timeline
- Number of revisions
- Terms
- Expiry date

Client can then:

**Accept Quote**

or

**Decline Quote**

Accepted quotations should automatically create an order/project.

### **13. Client Dashboard**

Create a dashboard based on subscription level.

Dashboard sections:

- Overview
- My Profile
- My Subscription
- Browse Designers
- Favourite Designers
- My Services
- Shopping Cart
- My Orders
- My Projects
- Messages
- Quotes
- Reviews
- Notifications
- Billing
- Account Settings

Dashboard overview should display:

- Active projects
- Pending requests
- Completed projects
- Outstanding payments

- Favourite designers
- Recent messages
- Subscription status

## **14. Designer Dashboard**

Create a dedicated designer dashboard.

Sections:

- Dashboard
- Designer Profile
- Portfolio
- Services
- Orders
- Projects
- Enquiries
- Messages
- Quotes
- Reviews
- Earnings
- Availability
- Analytics
- Settings

Dashboard metrics:

- Total projects
- Active projects
- Completed projects
- Total earnings
- Average rating
- Profile views
- Service views

- Enquiries
- Conversion rate

## **15. Designer Portfolio Management**

Allow designers to create portfolio projects.

Portfolio form:

- Project title
- Description
- Category
- Client/project type
- Project image
- Multiple images
- Video URL
- Tools/software used
- Skills
- Completion date
- Project outcome

Allow designers to:

- Add
- Edit
- Delete
- Reorder
- Publish/unpublish

portfolio items.

## **16. Designer Service Management**

Designers can create services.

Fields:

- Service title
- Category

- Description
- Price
- Delivery time
- Revisions
- Deliverables
- Requirements
- Images
- Tags
- Optional add-ons

Example:

### **Social Media Design Package**

Basic — \$100

Standard — \$250

Premium — \$500

Allow designers to create multiple packages.

## **17. Order and Project Management**

After a client purchases a service, create a project automatically.

Project lifecycle:

**Order Placed → Payment → Designer Confirmation → Requirements Submitted → Work in Progress → Client Review → Revision → Final Delivery → Completed**

Display project status visually.

Clients should be able to:

- Submit requirements
- Upload files
- Communicate with designer
- Review drafts
- Request revisions
- Approve final design
- Download deliverables

- Leave review

Designers should be able to:

- Accept order
- Request information
- Upload drafts
- Submit final work
- Track deadlines
- Mark milestones complete

## **18. Subscription Management**

Implement subscription functionality.

Users should be able to:

- Select a plan
- Start subscription
- Upgrade
- Downgrade
- Cancel
- Renew
- View billing history
- Download invoices

Display current subscription clearly.

Example:

### **MONO BUSINESS**

Active

Renews:

25 October 2026

Monthly price:

\$XX/month

Include confirmation screens for plan changes.

## 19. Payment System

Create a payment-ready architecture.

Support integration with a payment gateway such as:

### Stripe

Payment functionality should support:

- Subscription payments
- Service payments
- Order payments
- Invoices
- Payment status
- Refund status

For development/demo purposes, implement a **mock payment mode** if live payment credentials are unavailable.

Never hard-code API keys or payment credentials.

## 20. Admin Dashboard

Create a comprehensive administrator dashboard.

Admin should be able to manage:

### Users

- Clients
- Designers
- Agencies
- Administrators

### Designers

- Approve profiles
- Suspend profiles
- Verify designers
- Review reported profiles

## **Services**

- Approve services
- Edit/remove services
- Manage categories

## **Portfolios**

- Review
- Approve
- Remove reported content

## **Orders**

- View orders
- Track status
- Handle disputes

## **Subscriptions**

- View subscribers
- Manage plans
- Change pricing
- Enable/disable features

## **Payments**

- Transactions
- Revenue
- Refunds
- Subscription payments

## **Reviews**

- Monitor reviews
- Handle reported reviews

## **Reports**

Create analytics for:

- Total users

- Active clients
- Active designers
- Subscription revenue
- Service sales
- Orders
- Completed projects
- Average rating
- Monthly revenue
- Popular design categories
- Most viewed designers
- Conversion rates

## **21. Database Architecture**

Create a relational database.

Suggested entities:

### **Users**

- UserId
- FirstName
- LastName
- Email
- PasswordHash
- Role
- AccountStatus
- CreatedDate

### **ClientProfiles**

- ClientProfileId
- UserId
- ClientType
- CompanyName

- Industry
- Description
- ProfileImage

### **DesignerProfiles**

- DesignerProfileId
- UserId
- ProfessionalTitle
- Biography
- Location
- Experience
- HourlyRate
- Availability
- Rating
- ReviewCount
- VerificationStatus

### **Skills**

- SkillId
- Name

### **DesignerSkills**

- DesignerId
- SkillId

### **PortfolioProjects**

- PortfolioId
- DesignerId
- Title
- Description
- Category
- Image

- Tools
- CompletionDate
- Status

### **Services**

- ServiceId
- DesignerId
- CategoryId
- Title
- Description
- Price
- DeliveryDays
- Revisions
- Status

### **ServicePackages**

- PackageId
- ServiceId
- Name
- Price
- Deliverables
- DeliveryDays

### **Subscriptions**

- SubscriptionId
- UserId
- PlanId
- StartDate
- EndDate
- Status
- BillingCycle

### **SubscriptionPlans**

- PlanId
- PlanName
- Price
- BillingCycle
- Features
- Status

### **Orders**

- OrderId
- ClientId
- DesignerId
- OrderDate
- TotalAmount
- Status

### **OrderItems**

- OrderItemId
- OrderId
- ServiceId
- PackageId
- Quantity
- Price

### **Projects**

- ProjectId
- OrderId
- ClientId
- DesignerId
- ProjectName
- Description

- Status
- Deadline

### **Messages**

- MessageId
- SenderId
- ReceiverId
- ProjectId
- Message
- SentDate
- ReadStatus

### **Quotes**

- QuoteId
- ClientId
- DesignerId
- ProjectId
- Amount
- Description
- DeliveryDays
- Status
- ExpiryDate

### **Reviews**

- ReviewId
- ClientId
- DesignerId
- OrderId
- Rating
- QualityRating
- CommunicationRating

- TimelinessRating
- ProfessionalismRating
- ReviewText
- ReviewDate

## **Payments**

- PaymentId
- UserId
- OrderId
- SubscriptionId
- Amount
- PaymentStatus
- TransactionReference
- PaymentDate

## **22. Search and Discovery**

Implement an efficient designer discovery system.

Search should support:

**Keyword + Category + Budget + Rating + Experience + Availability**

Example:

"Find a logo designer under \$300 with a rating above 4.5."

Show relevant designers and services.

## **23. Notifications**

Implement notification functionality.

Notify users about:

- New messages
- New enquiries
- New quotations
- Quote acceptance
- Order confirmation

- Payment confirmation
- Project updates
- Revision requests
- Final delivery
- New reviews
- Subscription renewal
- Subscription expiry

Include an in-app notification centre.

## **24. Responsive Design**

The website must work properly on:

- Desktop
- Laptop
- Tablet
- Mobile

Navigation should automatically adapt.

Mobile interface should include a hamburger menu and optimized dashboards.

## **25. Security**

Implement:

- Secure authentication
- Password hashing
- Role-based authorization
- Input validation
- Server-side validation
- Secure file uploads
- Protection against SQL injection
- Protection against XSS
- CSRF protection
- Rate limiting where appropriate

- Secure session handling

Users must only be able to access resources belonging to their authorized role.

## **26. Recommended Technology Stack**

Build the application using a modern production-ready stack.

Preferred option:

### **Frontend**

- React
- TypeScript
- Tailwind CSS

### **Backend**

- Node.js
- REST API

or another modern backend framework if Manus determines a better architecture.

### **Database**

- PostgreSQL

### **Authentication**

- Secure JWT/session-based authentication

### **Payment**

- Stripe-ready architecture

### **File Storage**

Use cloud-compatible object storage architecture for portfolio images and project files.

## **27. SEO**

Implement SEO-friendly pages.

Include:

- SEO titles
- Meta descriptions
- Open Graph metadata
- Structured URLs

- Sitemap
- Robots.txt
- Semantic HTML
- Schema markup where appropriate

Example SEO page:

## **"Find Professional Logo Designers | Mono Design"**

### **28. Landing Page Content**

Create professional marketing copy throughout the website.

Suggested positioning:

#### **Main headline**

**"Where Great Ideas Meet Great Designers."**

#### **Supporting statement**

"Discover talented designers, explore creative portfolios, and get the design services you need—all in one platform."

#### **Three audience cards**

##### **For Individuals**

"Bring your personal ideas to life."

##### **For Businesses**

"Build a stronger brand with professional design."

##### **For Agencies**

"Scale your creative capacity with trusted designers."

### **29. How Mono Design Works**

Create a four-step section:

#### **1. Discover**

Find designers based on skills, services, rating and budget.

#### **2. Explore**

Review portfolios, services, ratings and previous work.

#### **3. Connect**

Contact designers or request a customized quotation.

#### **4. Create**

Purchase the service, manage the project and receive your final design.

### **30. Design Categories**

Create the following categories:

- Branding
- Logo Design
- Graphic Design
- UI/UX Design
- Web Design
- Social Media Design
- Advertising Design
- Packaging Design
- Print Design
- Presentation Design
- Illustration
- Motion Graphics
- Video Design
- Product Design
- Marketing Design

Make categories manageable by administrators.

### **31. User Experience Requirements**

The platform should minimize the number of steps required to:

1. Find a designer
2. View portfolio
3. Compare services
4. Contact designer
5. Request quote

6. Add service to cart
7. Checkout
8. Track project
9. Receive completed design
10. Review designer

Use clear CTA buttons throughout the platform.

### **32. Demo Data**

Populate the development environment with realistic demo data.

Create at least:

- 10 designers
- 30 portfolio projects
- 30 design services
- 10 clients
- 3 marketing agencies
- Sample reviews
- Sample orders
- Sample projects
- Sample messages
- Sample subscription records

Use realistic but fictional names and information.

### **33. Important UI Components**

Create reusable components for:

- Navbar
- Footer
- Designer Card
- Service Card
- Portfolio Card
- Rating Component

- Review Component
- Search Bar
- Filter Panel
- Pricing Card
- Subscription Selector
- Shopping Cart
- Checkout
- Messaging Window
- Quote Card
- Project Timeline
- Dashboard Cards
- Data Tables
- Modal Dialogs
- Notifications
- File Upload
- Image Gallery

### **34. Main Navigation**

Use the following navigation:

**Logo | Find Designers | Services | Categories | How It Works | Pricing | Become a Designer | Login | Get Started**

After login, display dashboard navigation according to the user's role.

### **35. Important Business Logic**

Implement these rules:

#### **Subscription**

A user must have an active subscription to access subscription-controlled features.

#### **Reviews**

Only clients with completed orders can review designers.

#### **Designer Services**

Designers can only manage their own services.

### **Portfolio**

Designers can only manage their own portfolio.

### **Orders**

Clients can only view their own orders.

Designers can only view orders assigned to them.

### **Projects**

Only the client and designer associated with a project can access project information.

### **Admin**

Administrators can manage all platform records.

## **36. Dashboard Access Rules**

### **Individual**

Basic client dashboard.

### **Business**

Business dashboard with multiple projects and team functionality.

### **Agency**

Advanced agency dashboard with multiple users, clients and projects.

### **Designer**

Designer management dashboard.

### **Administrator**

Complete platform administration dashboard.

## **37. Final Deliverable**

Build a **fully functional Mono Design MVP**, not just a static landing page.

The application should include:

- Responsive frontend
- Authentication
- User registration
- Role management

- Subscription plans
- Designer marketplace
- Designer profiles
- Portfolio
- Services marketplace
- Search/filtering
- Shopping cart
- Quote system
- Messaging
- Orders
- Project management
- Ratings/reviews
- Client dashboard
- Designer dashboard
- Admin dashboard
- Payment-ready architecture
- Notifications
- Database
- Demo data

All major workflows should be connected and testable.

### **38. Critical Development Requirement**

Do not create isolated mock screens.

Build the application as a **connected e-business platform** where the following workflow can actually be demonstrated:

**Visitor → Register → Select Client Type → Select Subscription Plan → Login → Search Designer → View Designer Profile → View Portfolio → View Services → Contact Designer OR Add Service to Cart → Checkout → Create Order → Create Project → Communicate with Designer → Receive Design → Approve/Request Revision → Complete Project → Submit Rating & Review**

Also demonstrate:

**Designer Registration → Create Profile → Upload Portfolio → Create Service → Receive Enquiry → Send Quote → Receive Order → Manage Project → Upload Final Work → Receive Review**

And:

**Administrator Login → Manage Users → Manage Designers → Manage Services → Manage Subscription Plans → Manage Orders → Manage Reviews → View Platform Analytics**

Prioritize **functionality, usability, clean architecture and a polished professional UI.**

The final result should look and feel like a real commercial SaaS marketplace rather than a student prototype.
