

Build a modern, responsive e-business marketplace called **MONO DESIGN**, connecting clients with professional designers. The platform should have a clean, minimalist, premium monochrome design using black, white, and grey with a subtle accent colour.

1. User Types

Support four roles:

- **Individual Client** – personal design requirements
- **Business Client** – business branding and marketing design
- **Marketing Agency** – multiple projects, team members and recurring design needs
- **Designer** – creates profiles, portfolios and design services
- **Admin** – manages the entire platform

2. Client Subscription Plans

Create 3 configurable subscription plans:

Mono Basic

For individuals:

- Browse/search designers
- View profiles and portfolios
- View ratings/reviews
- Contact designers
- Favourite designers
- Add services to cart
- Basic orders/projects

Mono Business

For businesses:

- Everything in Basic
- Multiple projects
- Request quotations
- Advanced search
- Business profile

- Multiple team members
- Project tracking
- Design briefs
- Priority support
- Analytics

Mono Agency

For marketing agencies:

- Everything in Business
- Multiple users/teams
- Multiple client projects
- Expanded/unlimited projects
- Bulk design requests
- Recurring services
- Designer collaboration
- Advanced analytics
- Priority designer matching
- Dedicated support

Include monthly/annual pricing, feature comparison, upgrade/downgrade/cancel subscription and billing history.

3. Main Website

Create:

- Home
- Find Designers
- Services
- Categories
- Pricing
- How It Works
- Designer Registration

- Login/Register
- Client Dashboard
- Designer Dashboard
- Admin Dashboard

Hero message:

"Where Great Ideas Meet Great Designers."

Allow visitors to search designers/services directly from the homepage.

4. Designer Marketplace

Clients can search and filter designers by:

- Name/keyword
- Design category
- Skills
- Price
- Rating
- Experience
- Location
- Availability

Designer cards should show:

- Photo
- Name
- Professional title
- Skills
- Rating/reviews
- Starting price
- Completed projects
- View Profile
- Contact
- Favourite

5. Designer Profile

Each designer should have:

- Profile photo
- Professional title
- Biography
- Skills
- Experience
- Location
- Availability
- Rating
- Reviews
- Portfolio
- Services
- Pricing

Allow clients to:

Contact Designer | Request Quote | View Services | Add Favourite

6. Portfolio

Designers can create, edit and delete portfolio projects.

Each project includes:

- Title
- Description
- Category
- Images
- Tools/software
- Completion date
- Skills

Use a professional image gallery.

7. Design Services

Designers can create services such as:

- Logo Design
- Branding
- Graphic Design
- UI/UX
- Web Design
- Social Media Design
- Advertising
- Packaging
- Presentation Design
- Illustration
- Motion Graphics

Each service should include:

- Title
- Description
- Price
- Delivery time
- Revisions
- Deliverables
- Images
- Optional packages/add-ons

Clients can:

View → Add to Cart → Checkout

or

Contact Designer → Request Quote

8. Shopping Cart & Checkout

Implement a functional cart where clients can:

- Add/remove services

- Review service details
- Add requirements
- View subtotal/total
- Apply discount code
- Checkout

Make the system payment-ready using **Stripe**, with mock payments for development if credentials are unavailable.

9. Quote & Messaging System

Clients can send project enquiries containing:

- Project description
- Budget
- Deadline
- Deliverables
- Attachments

Designers can respond with:

- Price
- Deliverables
- Timeline
- Revisions
- Terms

Clients can accept or reject quotations.

Include an in-app messaging system.

10. Order & Project Workflow

Implement:

Order → Payment → Designer Confirmation → Requirements → Work in Progress → Draft → Client Review → Revision → Final Delivery → Completion → Review

Clients can upload requirements, communicate, request revisions, approve work and download final files.

Designers can manage orders, deadlines, drafts, revisions and final delivery.

11. Ratings & Reviews

After a completed project, clients can rate designers.

Include:

- Overall rating
- Quality
- Communication
- Timeliness
- Professionalism
- Written review

Only clients with completed orders can submit reviews.

12. Client Dashboard

Include:

- Profile
- Subscription
- Browse Designers
- Favourites
- Services
- Cart
- Orders
- Projects
- Messages
- Quotes
- Reviews
- Notifications
- Billing

Show active projects, pending requests, orders and subscription status.

13. Designer Dashboard

Include:

- Profile
- Portfolio
- Services
- Orders
- Projects
- Enquiries
- Messages
- Quotes
- Reviews
- Earnings
- Availability
- Analytics

Show projects, earnings, ratings, profile views and enquiries.

14. Admin Dashboard

Admin can manage:

- Users
- Designers
- Client accounts
- Services
- Categories
- Portfolios
- Orders
- Projects
- Reviews
- Subscription plans
- Payments
- Reports

Analytics should include users, designers, orders, revenue, subscriptions, projects and popular categories.

15. Database

Use a relational database such as **PostgreSQL**.

Core entities:

Users, ClientProfiles, DesignerProfiles, Skills, PortfolioProjects, Services, ServicePackages, SubscriptionPlans, Subscriptions, Orders, OrderItems, Projects, Quotes, Messages, Reviews, Payments, Notifications.

Implement proper relationships and role-based access.

16. Technology

Preferred stack:

- React + TypeScript
- Tailwind CSS
- Node.js backend/API
- PostgreSQL
- Secure authentication
- Stripe-ready payment architecture
- Cloud-compatible file storage

Use reusable components and clean architecture.

17. Security

Implement:

- Secure authentication
- Password hashing
- Role-based authorization
- Input validation
- Secure file uploads
- XSS/SQL injection protection
- CSRF protection
- Secure sessions

Users must only access their own authorized data.

18. Demo Data

Populate the MVP with realistic fictional data:

- 10 designers
- 30 portfolio projects
- 30 services
- Sample clients
- Sample agencies
- Reviews
- Orders
- Projects
- Messages

19. Critical Requirement

Build a **functional connected MVP, not just static UI screens.**

The main client workflow must work:

Register → Select Client Type → Select Subscription → Login → Search Designer → View Profile → View Portfolio → View Services → Contact/Request Quote OR Add to Cart → Checkout → Order → Project → Communication → Delivery → Review

Designer workflow:

Register → Create Profile → Upload Portfolio → Create Services → Receive Enquiry → Send Quote → Receive Order → Manage Project → Deliver Work → Receive Review

Admin workflow:

Login → Manage Users → Designers → Services → Subscriptions → Orders → Reviews → Analytics

Prioritize a polished UI, functional workflows, responsive design and a realistic marketplace experience.
