

Customer Journey Mapping & Service Blueprinting

Connecting frontstage end-user experiences with backstage organizational capability and multi-channel touchpoint systems.

Frontstage & Backstage Alignment

Omnichannel Optimization

Operational Pain-Point Reduction

Customer Journey vs. Service Design

Customer Journey

What the customer experiences.

- External perception of every interaction stage
- Driven by emotions, needs, and pain points
- Focuses on total end-to-end satisfaction

Service Design

How the organization creates that experience.

- Internal orchestration of systems and staff
- Harmonizes people, technology, and operations
- Guarantees backstage delivery support

Customer Journey Map Dimensions

1. Actions

Steps taken by customer at each stage.

2. Touchpoints

Direct interaction channels and interfaces.

3. Emotions

Emotional curve from excitement to distress.

4. Pain Points

Friction, delay, and user frustration.

5. Opportunities

Design fixes to elevate satisfaction.

Moments of Truth

✓ Positive Moment

Hotel Check-In Benchmark

"Welcome! Reservation ready, room 1205 assigned instantly."

Outcome: Immediate trust and delight.

✗ Negative Moment

Service Breakdown

"Reservation lost after long flight. Please wait indefinitely."

Outcome: Permanent brand erosion.

📱 Digital Fix

Loan Application Tracking

Replaces multi-day blackhole waiting with automated visual milestones: Application ✓ → Verified ✓ → Under Review.

Airline Booking Emotional Curve

i Design Takeaway: Isolating the payment failure drop-off provides immediate focus for high-ROI technical intervention.

Touchpoint Ecosystem

Digital Touchpoints

Apps, Websites, Social Media, Automated Notifications.

Physical Touchpoints

Retail Stores, Packaging, Reception Desks, Signage.

Human Touchpoints

Support Agents, Sales Representatives, Technicians.

Multichannel vs. Omnichannel

ISOLATED

Multichannel

Many Separate Channels

Website, App, and Physical Store operate independently in silos. Stock information and cart items do not synchronize across platforms.

CONNECTED

Omnichannel

Unified Customer Ecosystem

Channels share real-time order data. Add item on web → view active cart in mobile app → buy online and collect in physical store smoothly.

Service Blueprinting Structure

Frontstage (Customer Visible)

Direct interactions: User opens app → Selects item → Submits order → Tracks courier.

Line of Visibility

The boundary separating direct customer experience from internal execution.

Backstage (Behind the Scenes)

Invisible execution: Order routed to POS → Kitchen prepares order → GPS driver assignment.

SERVICE BLUEPRINT TEMPLATE

Why Service Blueprinting Matters

Symptom: "App says food is ready, but I still wait 20 minutes!"

Customer Journey Map identifies frontstage customer frustration at waiting stage.

Backstage Diagnosis

Automated notification fires based on fixed timer instead of real-time kitchen completion status.

Service Design Solution

Integrate kitchen KDS bump screen directly with customer push notification system.

End-to-End E-Commerce Lifecycle

The J-B-T-I Memory Formula

1. J

JOURNEY

What does the customer experience?

2. B

BLUEPRINT

What happens behind the scenes?

3. T

TOUCHPOINT

Where are key interactions?

4. I

IMPROVE

How do we eliminate pain points?

CLASSROOM EXERCISE

Case Application: Education Enrolment

From social media enquiry to orientation & class commencement. Identify the 8 stages, touchpoints, emotions, and backstage automation opportunities.

Q&A & Discussion
