

LEARNING OUTCOME 3 (LO3)

Service Design & Customer Journey Mapping

Connecting end-to-end customer experiences with backstage operational capabilities.

Customer Journey vs. Service Design

Customer Journey

What the customer directly experiences across sequential interactions.

Service Design

How the organization orchestrates internal operations to create that experience.

Core Components of Journey Mapping

Actions

Sequential steps performed during interaction.

Emotions

Sentiment shifts from search to review.

Pain Points

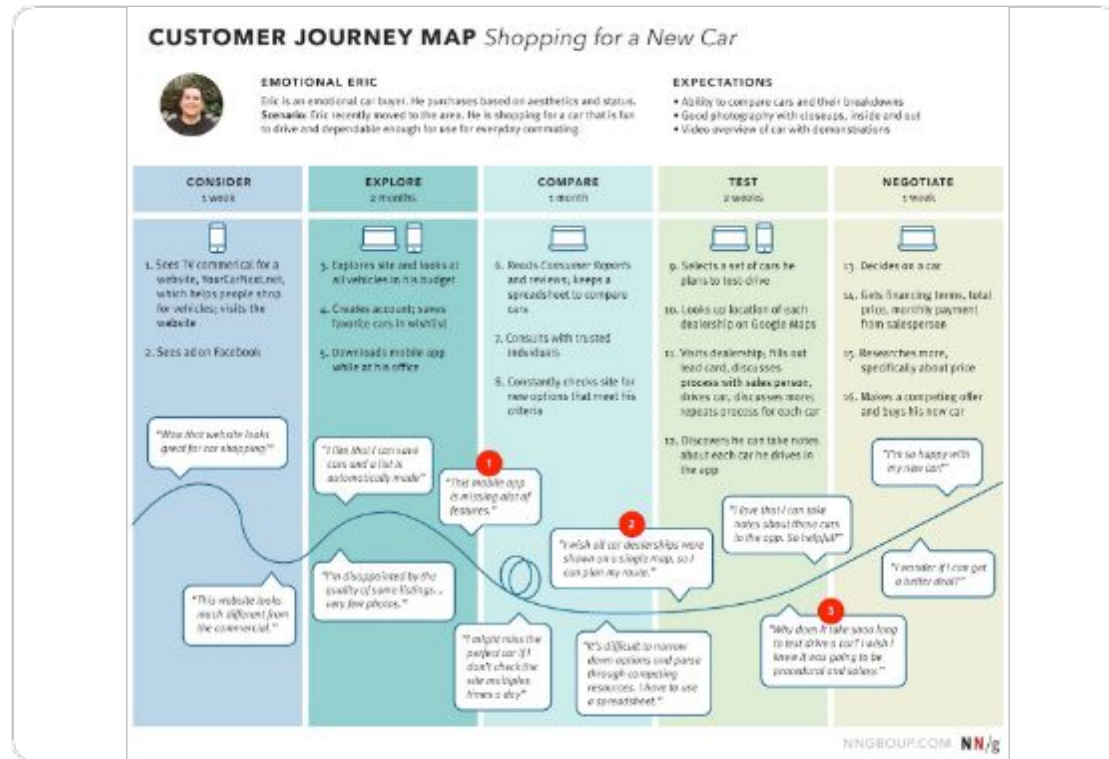

Sources of delay, confusion, or friction.

Opportunities

Targeted interventions to enhance value.

Mapping an Online Food Delivery Journey

1. Restaurant Search

Friction point: Excessive unfiltered choices.

2. Waiting & Tracking

Critical vulnerability: Lack of real-time updates.

3. Delivery & Review

Delight factor: Instant 1-click feedback loop.

Transforming Friction into Value

❌ Common Friction Points

Silent Status: Zero order notifications.

Form Overload: Excessive registration fields.

Channel Silos: Repeatedly re-entering details.

✅ Redesign Solutions

Proactive Alerts: Automated stage notifications.

Simplified Checkout: Single-click validation.

Unified Profiles: Real-time data sync.

Critical Moments of Truth

1

High-Impact Interaction

Single moments that radically alter overall brand perception.

Touchpoint Classification

Digital

Mobile applications, websites, live chat, self-service portals.

Physical

Retail counters, product packaging, store environments.

Human

Support representatives, sales agents, field technicians.

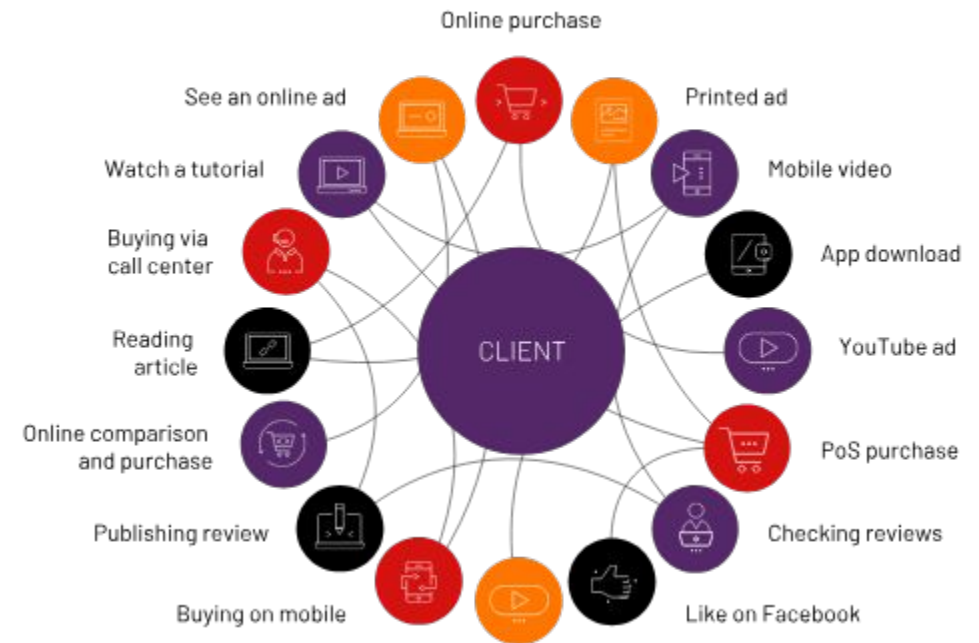

Multichannel vs. Omnichannel

Multichannel = Disconnected

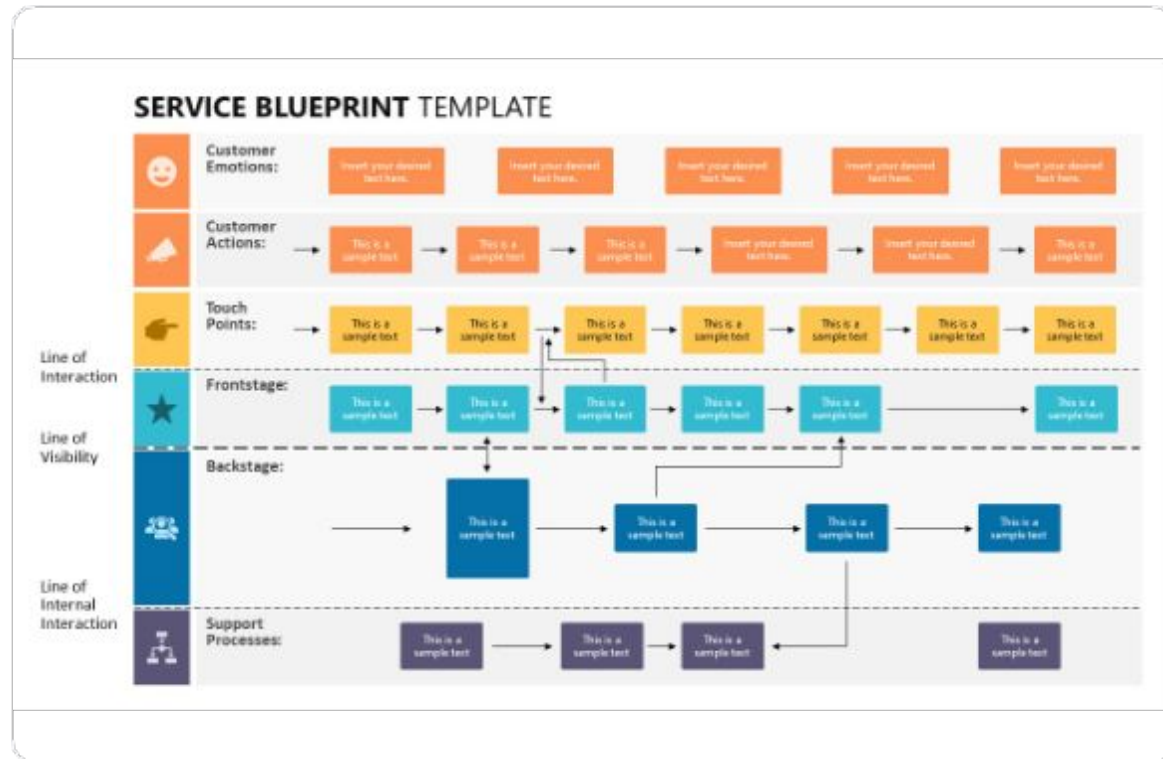

Multiple channels operating in independent functional silos.

Omnichannel = Connected

Unified backend real-time data shared seamlessly across channels.

Frontstage vs. Backstage Blueprinting

👁 Frontstage (Visible)

Kiosks, mobile UI, customer service staff interaction.

LINE OF VISIBILITY

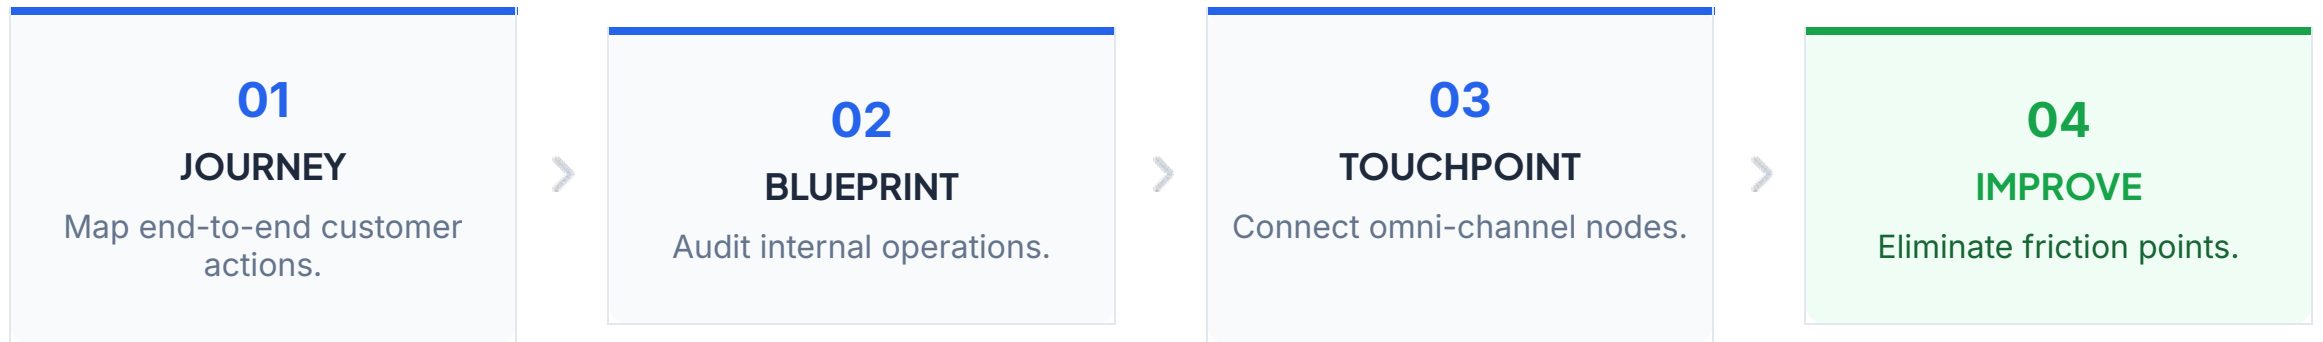

🔒 Backstage (Invisible)

Inventory databases, kitchen prep systems, driver routing.

Uncovering Hidden Root Causes

Symptom Stage	Customer Perception	Backstage Root Cause
Food Delivery	"App says ready, but I'm waiting."	Manual status triggers unlinked to kitchen systems.
Hotel Check-In	"Room unavailable at 2 PM."	Housekeeping app disconnected from PMS status.
Retail Store	"Stock listed online missing in store."	Batch inventory updates instead of real-time sync.

The Service Improvement Formula

SUMMARY & CONCLUSION

Seamless Frontstage Starts with Integrated Backstage Systems

Mastering LO3 requires evaluating both the emotional customer path and operational backstage workflows.
